OVERVIEW:
Embedding an image is preferable over attaching an image because then the user viewing it will not need to do anything to view it and can read what you have to say while they look at the image.

HOW TO EMBED AN IMAGE IN BLACKBOARD:

1. Open the content editor (in a Discussion Board thread, the write submission area of an assignment, etc.).

2. Click on the image icon in the bottom left-hand side of the tools.
3. In the popup window, click on Browse My Computer and choose the image from your computer OR copy and paste in the URL for the image in the Image URL box.

4. Type in an image description and title. If you want to change its size, click on the appearance tab.

5. Then select Insert.
